

**Stanford University
Hillview Facility
Palo Alto, California**

Client: Stanford University
Palo Alto, California

Scope: 60,000 sq. ft. Tenant
Improvement and Shell &
Core Upgrade

The Stanford University laboratory project consists of 60,000 sq. ft. of tenant improvement along with a shell & core upgrade. The project relocated clinical laboratories from the main Stanford Medical Center to the off-site location at Hillview. The project includes robotic equipment and vertical storage units.

The building mechanical systems are upgraded for 100% outside air supply. New water chillers, cooling towers, heating water boilers, air handlers and exhaust fans are incorporated.

Plumbing improvements include new air compressors, vacuum pumps, laboratory gas manifolds, and a laboratory waste piping system. The existing emergency generator and UPS systems were extended to include back-up of the mechanical and laboratory equipment systems.
